ANURAG SHARMA

Lalitpur, Nepal | Gmail | +977 9862051754 | Portfolio | LinkedIn | Github

PROFESSIONAL SUMMARY

Data Scientist with hands-on experience in Data Preprocessing, Statistical Analysis, Feature Engineering and deriving actionable insights from complex datasets through academic and self-driven projects. Familiar with Machine Learning concepts, Predictive Modeling and data driven techniques to generate actionable business insights.

TECHNICAL SKILLS

Languages: PostgreSQL(Complex joins, Window Function, CTEs, Aggregation, Indexing, Subqueries), **Python**

Python Libraries: Pandas, Numpy, Matplotlib, Seaborn

Machine Learning: Supervised Learning, Unsupervised Learning, Classification, Regression, Clustering, Model Evaluation

Data Analysis and Statistics: Data Cleaning, Exploratory Data Analysis (EDA), Statistics Analysis, Feature Engineering, Hypothesis Testing, KPI Analysis

Data Visualation: Power BI, Tableau, Matplotlib, Seaborn

Tools: Excel (Pivot Tables, VLOOKUP, XLOOKUP), Git, Jupyter Notebook

PROJECTS

Customer Churn Prediction System | GitHub | Tools: Python, Pandas, Scikit-learn, XGBoost, SHAP, Streamlit

- *Analyzed customer data to identify key factor influencing churn and performed data cleaning, Exploratory Data Analysis (EDA) and Feature Engineering.*
- *Developed and evaluated machine learning classification models, including Logistics Regression and XGBoost, using precision, recall, F1-score, and ROC-AUC.*
- *Applied SHAP to interpret model predictions and developed an interactive application to estimate customer churn probability and support targeted retention strategies.*

Retail Demand Forecasting | GitHub | Tools: Python, Pandas, Stats Model, XGBoost, MLflow

- *Performed exploratory time-series analysis on historical retail sales data to identify trends, seasonality and demand patterns.*
- *Engineered time-based features and developed forecasting models using historical sales, calender variables, and other relevant factors to predict future product demand.*
- *Compare forecasting models using MAE, RMSE, and WAPE, providing data-driven insights to support inventory planning and reduce potential overstocking and stock-outs.*

RAG-Based AI Document Assistant | GitHub | Tools: Python, Hugging Face, FAISS, LLM APIs, Fast API, Streamlit

- *Developed a document question-answering system using Retrieval- Augmented Generation (RAG) to retrieve relevant information from uploaded documents and generate context aware response.*
- *Implemented text chunking, embedding generation, and vector similarity search using FAISS to retrieve relevant document passages for user queries.*
- *Integrated a large language model to generate answers grounded in retrieved content and built an interactive interface with source reference to improve answer traceability..*

CERTIFICATIONS & ACHIEVEMENTS

- **Machine Learning with Python** | Certificate
- **Python for Data Analysis (Pandas)** | Certificate
- **Advanced SQL** | Certificate
- **Mathematics and Statistics for Data Science** | Certificate

- **National AI Hackathon 26** - Kode Dristi | Certificate

EDUCATION

BSc. CSIT (Computer Science and Information Technology)

At Tribhuwan University, Lalitpur, Nepal
Expected Graduation at 2028
Relevant Courses: Statistics, Mathematics, DBMS, AI
